Good Morning ladies and gentlemen of the Reno City Of Council my name is Amari Davis I came here to talk about the need of more public indoor basketball courts. Basketball has done a lot for me through thick and thin times, we need more indoor basketball courts for the community because there are times where we cannot just go to a park and put-up shots and work on our game. I can recall one time when I was a part of the syndicate basketball team we had practice every Tuesday and Thursday at the park, this team wasn't just any team this team made me feel like family made me feel like I belong a feeling I needed, but then the winter had come around and it started to snow day by day, so we had to cancel practice because of the courts being filled up with snow, and during this time I had went into a depression stage, because for the first time in my life I felt as if I belonged, and it was all taken from me and my team because of us not having the resources to go to an indoor public basketball court to practice. However indoor basketball courts provide a safe and controlled environment for people to engage in physical activity, and stay away from the danger in throughout the city. In the city of reno where weather conditions can be unpredictable, having indoor courts ensures that residents can enjoy the game year-round, regardless of snow or extreme temperatures. In this thing we call life everyone need there escape every once and a while, and building more indoor public basketball courts may just be that for some people in this world, just being able to go to their local indoor public basketball courts to clear their mind and block out all the negativity going on in their life's. In conclusion, the addition of more indoor public basketball courts is not just about sports; it's about building a healthier, more connected, and vibrant community. By making this investment, we are ensuring the physical and social well-being of our residents. Together, we can make this vision a reality.

Thank you.

Good afternoon city council I'm a senior from Procter R. Hug High and I'm here to talk about the roads in town and around the schools. One of the roads that I'm talking about is on north McCarran, the one by the funeral home. The main reason why I say this road should be fixed is because most car accidents happen because of speed bumps, but imagine your going 50 miles per hour and out of no where your steering wheel starts to shake. A lot of people could handle it but imagine an elderly person that would not be able to react as one. This can cause a lot of accidents and is not safe. Not just for elderly people but for everyone. For example, it says the city spends over 53 million dollars fixing the street this year but is there any improvements is my question.

Good morning,

We have inquired several times. This morning two more horses were hit which means two more people could be injured. Between the horses, safety for the public, and trying to turn onto my street just to get home from Veterans to Declan with people pushing me at 50+ mph, I know its a matter of time...one of these days. 45 mph between rio wrangler and South Meadows is too fast!!!! PLEASE.... PLEASE remove the 45 mph signs leaving the 35 mph signs as the traffic is rapidly multiplying. Begging someone to please lower this limit since we already tried increasing speed control.

At 45 mph, people jump to 50+.

Please help the community to stay safe.

In addition, we've witnessed the horse connection volunteers trying to physically assist at times and cars speeding right by them at 50+ mph and almost hit ourselves when we slowed down for them.

Sincerely,  
Michelle Mariconi
