EXECUTIVE SUMMARY

The 2024 Sewer Utility Rate Sufficiency Analysis was commissioned by the City of Reno (City) to assess the sufficiency of the City's current sewer user charges as defined in Reno Municipal Code 12.16. This analysis updated the digital rate model¹ used in the 2022 analysis with the following data:

- Fiscal Year 2025 (FY 25) Budgeted Revenues & Expenses
- 20-year Capital Improvement Program (CIP)
- FY 25 Customer Statistics
- 40000 and 40001 Fund Balance Information
- Growth Trends, Inflation Escalators, Staffing and Equipment Needs, and other Programs or Factors that influence utility financial performance

Since October 1, 2016, the City of Reno sewer user rate has adjusted annually by an amount equal to the increase of the Consumer Price Index-All Urban Consumers (CPI-U) for the west urban area, as published by the Bureau of Labor Statistics. This analysis found that user rate revenues under the existing rate structure will not be able to fully fund annual operating expenses, capital outlay, future debt service payments, and meet operating reserve policies without adjustments above and beyond CPI-U. The adjustments proposed in Table 1 are recommended to be implemented starting in FY 26.

Table 1: Sewer Fund Preliminary Revenue Adjustments

	FY 25	FY 26	FY 27	FY 28	FY 29	FY 30
Rate Adjustments	CPI-U	8.0%	8.0%	CPI-U	CPI-U	CPI-U

¹ All data presented in this report is from model v8.1

1.0 INTRODUCTION

DOWL investigated the sufficiency of revenue generated from the City's sewer utility's user rates. The user rate study period in this analysis is 5-years or through FY 30. All rate model calculations are based on a fiscal year starting on July 1st of each year and ending on June 30th of the following calendar year.

The goal of this analysis is to confirm a financial plan that ensures funding for annual operating expenses, capital outlay for repair and replacement projects, maintaining adequate levels of cash reserves, and minimizes the need for future user rate hikes. The following objectives were used as guiding principles in the preparation of user rate analysis:

- Recurring expenses should be paid by recurring revenues.
- The Operating Fund shall maintain a minimum Operating Reserve equal to 60 days of utility operating expenses.

These goals and objectives are referenced and expanded upon throughout each section of this report.

2.0 USER RATE DATA AND ASSUMPTIONS

The City provided fund statements, historical financial reports, budgets, and other financial information regarding the sewer utility for FY 23 thru 25. This information was used to develop long-term financial projections for the sewer utility. This report presents a 5-year financial plan and proposes rates through FY 30. The assumptions used to evaluate the financial stability of the utility were developed in coordination with or provided by City staff. Assumptions such as future inflation factors, customer account growth rates, and beginning cash balances are summarized in this section.

2.1 Inflation Rates

To prepare the 5-year financial plan, inflation factors are applied to future revenue and expense projections over the study period. The inflation factors used, shown in Table 2, were developed collaboratively with City staff. These factors are considered conservative estimates of future economic conditions, based on historical data. The CPI-U is assumed to escalate by 3 percent² annually. Based on City financial records, labor cost and benefits cost inflation was assumed to escalate by 5 percent annually. Customer growth is anticipated to increase at 1 percent annually throughout the study period.

²The CPI-U increase was 2.5% for 2024. The running 5-year annual average for the west region from 2020 thru 2024 is 4.1%.

Table 2: Inflation Factor Assumptions

Key Factors	Inflation Rate per Year
General Cost Inflation (CPI-U)	3.0%
Construction Cost Inflation (ENR-CCI)	3.6%
Labor Cost Inflation	5.0%
Benefits Cost Inflation	5.0%
Customer Growth	1.0%

2.2 Operating Reserves

The City maintains reserve funds from user rates under Operating Fund 40000. Based on the City's financial records, the Operating Fund's beginning cash balance in FY 25 was \$108 million (M). Maintaining a cash balance that allows for variability in revenues and expenses, on an annual basis, can be accomplished through adequate funding and using reserves to compensate for annual shortfalls. City policy currently requires the fund to maintain at least 60 days of operating expenses as its Operating Reserve with a goal of 120 days of operating expenses.

Per rate model projections, the minimum reserve increases from \$9.8M in FY 25 to \$12.9M in FY 30.

3.0 SEWER REVENUE REQUIREMENT

The revenue requirement presents the relationship between revenue collected from user fees and the costs incurred to serve those customers. This study performs an analysis over the 5-year study period and is used to determine the approximate rate adjustments needed to support projected expenses and capital improvement projects.

3.1 Projected Revenues

The City's historic actuals for FY 20 through FY 24 were reviewed for this study. The City also provided the FY 25 budget. FY 25 was selected to be the starting point for revenue projections for nearly all revenue and expense items. Approximately \$87M is projected to be collected in rate revenue and an additional \$9M collected from non-rate revenue sources in FY 25. Table 3 shows the projected revenues from FY 25 through FY 30. Considering the customer growth and inflationary factors described in Section 2.1, total projected revenues will increase to approximately \$106M by FY 30 without any additional rate increases.

Table 3: Projected System Revenues (\$M)

Revenues	FY 25	CY 26	CY 27	CY 28	CY 29	CY 30
Rate Revenues	\$ 86.97	\$ 90.45	\$ 94.08	\$ 97.86	\$ 101.79	\$ 105.87
Additional Revenues from Rate Adjustment	-	\$ 4.52	\$ 9.64	\$ 10.03	\$ 10.43	\$ 10.85
Miscellaneous Revenues	\$ 9.00	\$ 8.28	\$ 2.76	\$ 2.83	\$ 2.90	\$ 2.98
Total Revenues	\$ 95.97	\$ 103.26	\$ 106.48	\$ 110.72	\$ 115.12	\$ 120.17

3.2 Projected Costs

Sewer fund expenses consist of sewer operation and maintenance (O&M), capital outlay, and debt service expenses. Similar to the revenue forecast, FY 25 was selected to be the starting point or basis for the projection of system costs. Table 4 below shows the projected expenses from FY 25 through FY 30.

Table 4: Projected System Expenses (\$M)

Expenses	FY 25	FY 26	FY 27	FY 28	FY 29	FY 30
O & M	\$ 59.32	\$ 62.26	\$ 65.50	\$ 70.73	\$ 74.43	\$ 78.32
Affordable Housing	-	\$ 11.32 ³	-	-	-	-
Capital Outlay	\$ 63.89	\$ 41.71	\$ 72.37	\$ 61.40	\$ 32.99	\$ 34.78
Existing Debt Service	\$ 1.52	\$ 0.29	-	-	-	-
Future Debt Service	-	-	-	\$ 0.986	\$ 4.21	\$ 4.21
Total Expenses	\$ 124.73	\$ 115.57	\$ 137.87	\$ 133.11	\$ 111.63	\$ 117.32

³ The Sewer Operating Fund intends on taking a deduction of \$11,318.399 in FY 26 to account for reduced connection fees collected from Affordable Housing projects since FY 22.

3.2.1 O&M Expenses and Forecast

The City's O&M expenses consist of ongoing annual costs which can generally be classified as collection, sewage treatment, and administrative. Over the 5-year study period, the total sewer O&M expenses are projected to increase from \$59.3M in FY 25 to approximately \$78.3M by FY 30.

3.2.2 Capital Projects

The City developed a 20-year CIP to address the needs of the system. Repair and Replacement projects maintain the system infrastructure and the capacity that is currently in place for existing connections. As the system ages, the City makes regular investments to maintain the integrity of its facilities through user rate revenues. With the exception of the projects listed in Section 3.2.4 all other Repair and Replacement projects will be funded through the City's reserves. The 5-year CIP is displayed in Table 5.

Table 5: Repair and Replacement Capital Outlay (\$M)

Expenses	FY 25	FY 26	FY 27	FY 28	FY 29	FY 30
CIP funded by Rates	\$ 63.89	\$ 76.71	\$ 103.27	\$ 61.40	\$ 32.99	\$ 34.78
Grant Funding	\$ 2.05	\$ 5.59	-	-	-	-
Loans	-	\$ 35.00	\$ 30.90	-	-	-
Total Capital Outlay	\$ 61.84	\$ 36.11	\$ 72.37	\$ 61.40	\$ 32.99	\$ 34.78

3.2.3 Existing Debt Service

The City has one outstanding debt obligation that is specific to user rates under the 2016 Sewer General Refunding Bond. The annual debt payments decrease to \$1.5M in FY 25 and retire in FY 26 following a \$0.287M payment.

3.2.4 New Debt Service

The repair and replacement CIP in FY 25 thru FY 28 is approximately two to three times the average year in the current 20-year CIP. Because of this condition, the City intends on assuming debt obligations for the following projects:

- TMWRF Dewatering Facility \$30.9M
- Advanced Purified Water Facility (APWF) \$35.0M

Annual debt service payments of \$1,972,794 are expected to commence in January 2028 for the TMWRF Dewatering Facility and payments of \$2,234,499 for the APWF will begin in July of 2028.

3.3 Projected Revenue Requirement

As seen in Figure 1, revenues under the existing rate structure are not able to fully fund annual operating expenses, capital outlay, and future debt service payments without adjustments. The revenue adjustments stated in Table 6 will allow the sewer utility to meet Sewer Fund financial policies across the entire study period.

Table 6: Sewer Fund Proposed Revenue Adjustments

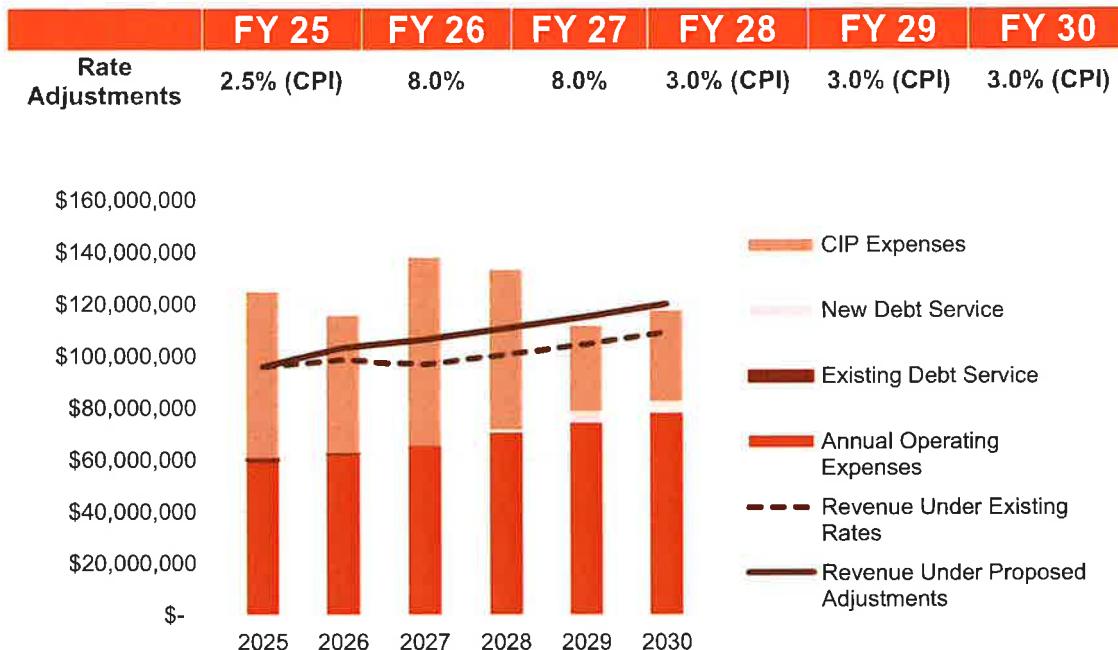

Figure 1: Operating Fund Cashflow Projections

3.4 Projected Cash Reserves

As shown in Figure 2, without revenue adjustments the sewer utility will deplete cash reserves and start operating in a deficit starting in FY 28.

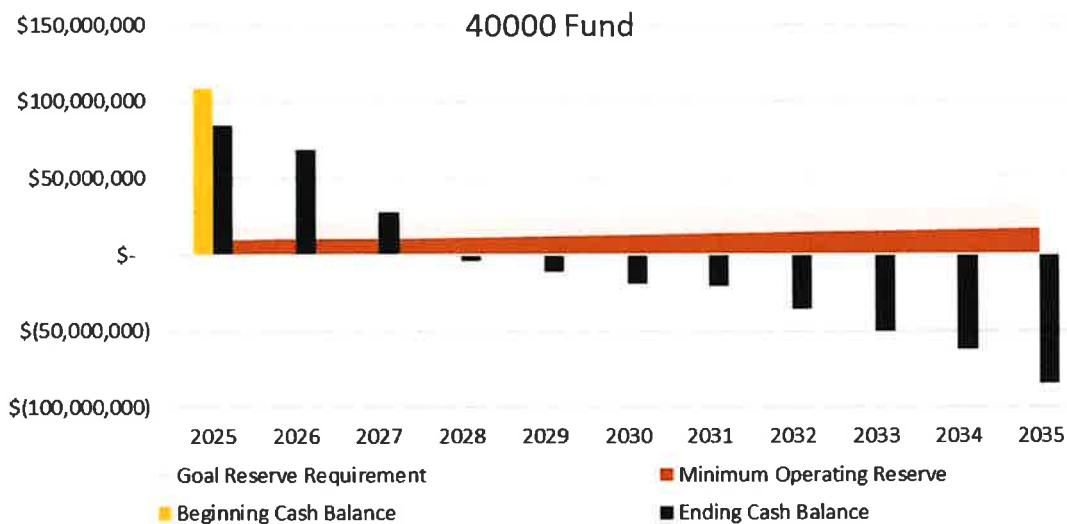

Figure 2: Sewer Operating Reserve Projections Under CPI-U Only

As shown in Figure 3, revenue adjustments proposed in Table 6 will allow the sewer utility to meet all financial policies across the entire study period.

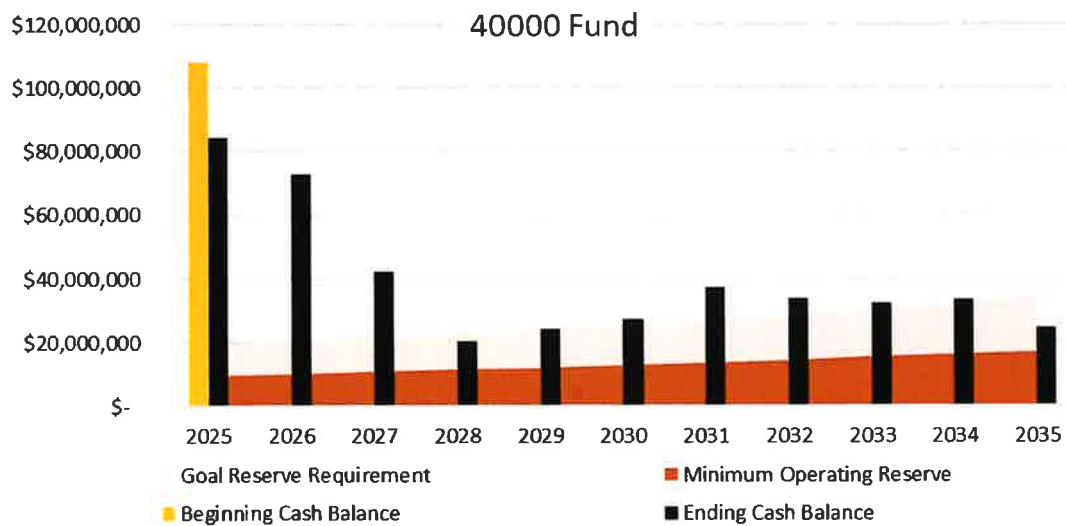

Figure 3: Sewer Operating Reserve Projections Under Proposed Rate Adjustments

3.5 Recommended Rate Schedule

The schedule presented in Table 7 applied the recommended rate adjustments to the existing rate structure.

Table 7: Proposed 5-Year Rate Schedule (Monthly)

Customer	Current Rate	FY 26	FY 27	FY 28	FY 29	FY 30
Residential	\$58.28	\$62.94	\$67.98	\$70.02	\$72.12	\$74.28
Multi-Family	\$47.80	\$51.62	\$55.75	\$57.43	\$59.15	\$60.92
Commercial (Base)	\$58.28	\$62.94	\$67.98	\$70.02	\$72.12	\$74.28
Commercial ⁴ (per kgal)	\$9.10	\$9.83	\$10.61	\$10.93	\$11.26	\$11.60

4.0 CONCLUSION AND RECOMMENDATION

Based on the results of the sufficiency analysis, it is recommended the City adjust all user rates by a fixed total of 8 percent in FY 26 and FY 27 then continue annual CPI-U adjustments starting in FY 28. As seen in Figure 3, the City's ending cash balance will be above the operating reserve minimum at the end of each year studied. Table 7 provides the recommended 5-year user rate schedule.
