Comments	Reno doesn't need a data center. Reno needs to focus on building the energy infrastructure that can support the what is already in place. This will put negative impact on the energy infrastructure in the area. This isn't fair to Reno citizens for something to take so many resources without providing support to the community.

Comments	I will need more information, but to have a 24 hour center in this location is not a good idea. We already have enough crime and loose electricity to often.
