Subject: City of Reno, CA 2023/2024 Wet Weather Sanitary Sewer Flow Monitoring
Open Channel Flow Monitoring Services, 38 flow monitoring sites, 8 rain gauges for 2 months

Dear Mr. Flores:

It is our understanding that the City of Reno (City) is requesting V&A Consulting Engineers, Inc. (V&A) services to perform flow monitoring in the City of Reno, NV. There will be 38 flow monitoring sites and 8 rain gauge sites to be installed for 2 months. The purpose of this work is to establish a dry weather flow baseline and assess wet weather flows to understand peaking factors and gauge potential inflow/infiltration. The following is our detailed scope of work for the subject services.

Scope of Work

Task | Description

1. **Project Management:** The objective of this task is to track and execute the project following the schedule, budget, and quality expectations that are established. This task includes the following project management work activities:
 - a. Monitor project progress, including work completed, work remaining, budget expended, schedule, estimated cost of work remaining, and estimated cost at completion; manage activities within the total project budget.
 - b. Monitor project activities for potential changes and anticipate changes whenever possible; with approval, modify project tasks, task budgets, and approaches to keep the overall project within budget and on schedule.
 - c. Manage the quality of all work activities and project deliverables.
2. **Project Preparation and Site Reconnaissance:** V&A will review existing sanitary sewer plans and the Flow Monitoring Plan (or proposed flow monitoring location details) provided by the City in preparation for flow monitoring. The City will provide V&A with the draft and final list of flow monitoring locations, including pipe diameters, flow direction, and GIS shapefiles.

V&A will visit the proposed sites to verify the suitability of manholes and/or alternative manholes for the installation of flow meters. V&A's site reconnaissance will be limited to top-side investigations to verify manhole location and accessibility, identify traffic control requirements, and check hydraulics for manholes. V&A will consult with the City if alternative manholes are required for flow monitoring. V&A will capture plan view photos and video of the manhole as well as a street view of the manhole.

The site reconnaissance visit will document rain gauge placement areas, details, and measures taken to eliminate undesirable influences of surrounding topography, vegetation, structures, etc.

3. **Install/Calibrate/Remove Flow Meters and Rain Gauges (38 flow monitoring sites/8 rain gauges/2 months):** V&A will perform sewer system flow monitoring at 38 locations and place 8 rain gauges to collect dry- and wet-weather flow data for 2 months. V&A will prepare the flow monitoring equipment necessary for installing, calibrating, and removing the flow meters. Our team will coordinate all fieldwork with the City. Flow meters will be area-velocity flow meters capable of collecting flow level and velocity measurements in free-flow and surcharged hydraulic conditions.

Two 2-person V&A crews with field trucks and the necessary confined space entry (CSE), simple traffic control, and flow monitoring equipment will install, calibrate, and remove the flow meters and rain gauges. Installation and initial in-situ calibration of the 38 flow meters and 8 rain gauges is anticipated to take approximately (5) 8-hour workdays. V&A's proposal also includes the cost of 2 field visits during the study for data downloads, contingency visits, in-situ calibration, meter maintenance, and flow meter removals.

V&A will verify data integrity and that the meters are operational and clear of debris. V&A shall be responsible for the installation, calibration, and removal of the equipment for this project. Maintenance and meter malfunction will be documented and reported as soon as it is observed. V&A shall be prepared to extend the duration of the flow monitoring period as requested by the City.

V&A will install 8 rain gauges at secure locations, which are free of canopy cover and generally located within proximity to all flow monitoring locations. V&A will also download publicly available rain data from <https://www.wunderground.com/> for redundancy purposes in case issues arise with the 8 installed rain gauges.

4. **Flow Monitoring Final Report:** Following the flow monitoring activities and after the meters are removed, V&A shall download and reduce the data in 5-minute intervals into Excel spreadsheets for data analysis, data QA/QC, and report preparation. One Draft version and one Final version of the report will be prepared and submitted in electronic format (PDF). The report will include the following information:
 - a. A summary of the flow monitoring equipment used.
 - b. Location maps with address, pipe size, manhole identifier number, flow channel condition, site schematics, and photographs.
 - c. Flow monitoring data with tabular outputs of depth, velocity, and flow rate and hydrographs of depth, velocity, and flow rates for each flow meter.
 - d. Total rainfall over the flow monitoring duration.
 - e. Triangulated rainfall data to flow monitoring sites.

Assumptions

The following is a list of additional assumptions used to develop V&A's scope of work.

- **Traffic Control:** V&A anticipates that straightforward traffic control arrangements, encompassing elements like a truck-mounted light board and a maximum taper length of 250 feet, will suffice for this project. In the event that more intricate or high-speed (>35 mph) traffic control setups necessitating a traffic control contractor become necessary, V&A will utilize the "5% Contingency" budget, as indicated below. V&A will provide advance notification to the City before utilizing the funds earmarked for the "5% Contingency."
- **Encroachment Permit:** V&A will be responsible for applying for and receiving a no-cost City of Reno encroachment permit. The time associated with obtaining the permit has been included in this proposal.

Exclusions and Limitations

The following items, unless otherwise indicated, are not included in the scope of work:

- Project-Specific Health and Safety Plan
- Supplied Air for conditions where it is unsafe due to atmospheric conditions.

Fee Proposal

V&A proposes to complete this work on a lump sum basis at a total cost not to exceed **\$262,500** the options stated in the summary table below with terms of a Net 30 days (contingent payment terms dependent on timely processing of V&A's submitted invoice). This fee is valid for 90 days from the date of this proposal. The scope of work was developed as a result of our discussions and represents our mutual understanding.

Summary of Cost per Task

Task	Amount
Flow Monitoring: 38 sites and Rain Gauge monitoring at 8 locations for 2 months:	\$250,000
5% Contingency	\$12,500

If unforeseen circumstances should arise that indicate that more time is required, V&A will provide a written estimate of additional required time and cost. V&A will not proceed with work beyond the not-to-exceed figure without written authorization from your office.

We are prepared to begin work on your project upon receiving written approval, a notice to proceed (NTP), or a purchase order from your office. We request that you carefully review this proposal to ensure a full understanding of the scope of the work.

On behalf of our staff and myself, I would like to thank you for the opportunity to be of service to you, the City of Reno. We look forward to collaborating with you.

Sincerely,
